PROBLEM STATEMENT

- Students face long waiting times during peak hours such as lunch breaks.
- This process leads to time wastage, overcrowding, and inefficient order management.
- There is no proper system to handle large volumes of orders efficiently.
- Students often experience confusion regarding order status, and food vendors struggle to manage multiple orders simultaneously.

KONGU ENGINEERING COLLEGE

PROJECT OBJECTIVE

- Build a web app which enable students to order food online before reaching the counter.
- Provide a structured system for handling multiple orders efficiently.
- Develop a simple and easy-to-use interface for students.
- Help students collect food without confusion.

KONGU ENGINEERING COLLEGE

PROJECT SCOPE

In-Scope :

Student registration and login (using college ID/email),View menu items from food court ,Add items to cart ,Place order online

Out-Scope :

No UPI, card, or wallet payments, No home delivery or hostel delivery, No real-time GPS tracking.

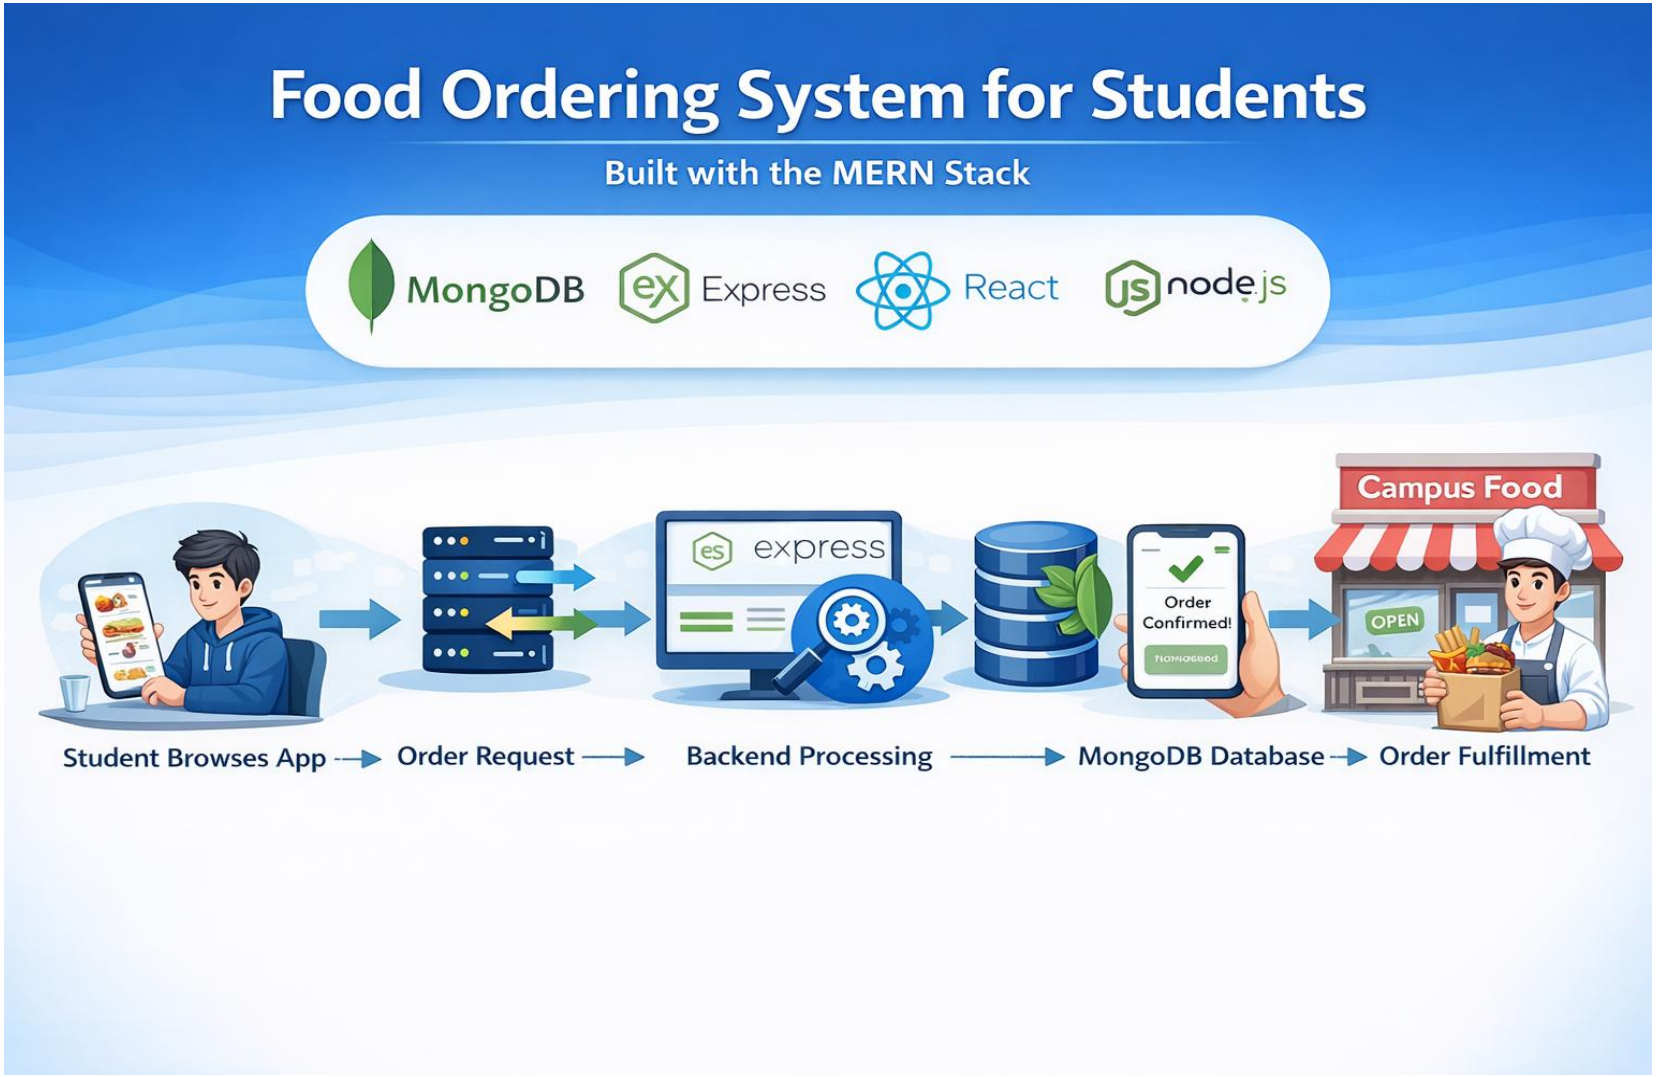
SYSTEM ARCHITECTURE



KONGU ENGINEERING COLLEGE

TECHNOLOGY STACK

- **User Interface**: React (for building interactive web pages)
- **Website Build Tool**: Vite (for faster development and loading)
- **Server Side**: Node.js + Express (to receive requests and process analysis)
- **Data Storage**: MongoDB (to save reports and training statistics)

CHALLENGES AND LIMITATIONS

- No guarantee that the student will actually come and pay after placing the order.
- The kitchen staff may get confused if too many orders come at once without real-time coordination.
- Even if students order online, they still need to stand in line to pay.
- Students may not know if food is ready or delayed.

KONGU ENGINEERING COLLEGE

CONCLUSION AND FUTURE WORK

- The system successfully reduces waiting time by allowing students to place orders online before reaching the food court.

- It improves order management by organizing requests and providing a structured workflow for staff.

- Future Scope:Integration of online payment options (UPI, cards, wallets) to reduce dependency on manual payment.

- Implementation of real-time notifications (SMS/app alerts) for order status updates.
